

# Post-Harvest Management to Improve Livelihoods Project

*Ethiopia 2008-2013*

The Post-Harvest Management to Improve Livelihoods Project, PHMIL, will ultimately support Ethiopian farmers and the agriculture and agri-food industries to promote food and livelihood security for the people of Ethiopia. It will also encourage economic development within the agriculture sector. This project will be implemented by Jimma University College of Agriculture and Veterinary Medicine, JUCAVM, in Ethiopia and NSAC and McGill University in Canada.

**Nova Scotia  
Agricultural  
College**

The project will support JUCAVM to become a leader in post-harvest management and technologies to improve the quality, value and availability of local agricultural products. The project will enable JUCAVM to provide high-quality training, research and extension services to address the challenges facing Ethiopia's agriculture sector. Technology transfer to the farm sector will promote rural development in Ethiopia.
